

Miami Corporation's Statement on Tempotest Home Fabrics Containing PFAS

Dear Valued Customers and Partners,

Tempotest Home products are thoughtfully designed to reflect our commitment to delivering exceptional quality while prioritizing environmental responsibility. As the industry navigates the shift toward safer, more sustainable practices, we want to share our approach to addressing the evolving regulations surrounding per- and poly-fluoroalkyl substances (PFAS).

PFAS in Context

PFAS are a group of durable chemicals widely used for their water, stain, and oil-resistant properties. However, increasing evidence has highlighted certain compounds within this group as potential environmental and health concerns. As a result, regulatory authorities across the U.S. are introducing restrictions that are reshaping industry standards and practices.

Response and Plan

In response to these changes, we have taken deliberate steps to innovate responsibly and strengthen our commitment to sustainability. We have worked closely with our manufacturing partners to develop advanced, non-PFAS solutions that maintain the performance and reliability our customers expect. These new materials represent our dedication to meeting both regulatory requirements and your quality expectations.

Since early 2023, we have been phasing out the distribution of materials known to be manufactured with intentionally added PFAS. As of 1/1/2025, we have purged our inventory of all Tempotest Home products known to be produced with intentionally added PFAS.

Partnering for Progress

This transition underscores our unwavering commitment to innovation, environmental responsibility, and safety. While changes of this magnitude can present challenges, we are confident that these steps will enhance both the sustainability and quality of our offerings.

We are here to support you throughout this transition. If you have any questions or require additional information about our PFAS-related changes, please contact us at tempotesthomesales@miamicorp.com.

Thank you for your trust and collaboration. Together, we are advancing toward a future where exceptional materials and environmental care are seamlessly aligned.
