Care & Cleaning**

## CARE AND HANDLING OF O'SEA® & REGALITE PLASTIC WINDOWS

Though the scratch resistant coating does provide protection, the flexible plastic windows are sensitive and can be scratched and marred if they are mishandled during unpacking, handling or cleaning. The flexible design of this material allows for rolling upon itself. Folding and creasing of the sheets is not recommended as this may cause irreversible damage.

Do not roll and stow sheets when dirty as this may damage the press polished sheets. Do not stow the sheets when wet as this can cause mildew to form.

## CLEANING O'SEA® & REGALITE® PLASTIC WINDOWS

Plastic windows should be cleaned regularly. Be sure to hose or blow off loose dirt particles from the surface and then use either plain water or a mild soap and water solution. **DO NOT USE HARSH DETERGENTS.** Apply with a clean, soft cloth or micro-fiber towel to gently clean window. Never use harsh brushes or abrasives when cleaning plastic windows.

The effect of sunlight combined with environmental pollution may alter the chemical structure of your plastic window, resulting in permanent discoloration and brittleness.

To maintain the clarity and extend the life of your plastic window, it is recommended that you regularly wash dirt and salt off sheet surfaces.

**Do not use cleaning products containing silicones, alcohols, or aerosols on press polished windows.** Some commercial vinyl care products and glass cleansers may contain these harmful ingredients, including Windex and RainX.

Continental does not endorse a specific cleaner.

Do not rub the plastic window when dry as this may scratch the window. Always flood the window with water before gently wiping it with a damp, soft cloth.
