

Cleaners and Disinfectants Recommended by CDC

As COVID-19 increasingly impacts all of our day-to-day lives, repeated cleaning and disinfecting of frequently touched surfaces is recommended by the CDC as a way to avoid exposure.

Cleaners and disinfectants recommended by the CDC to combat COVID-19 have also been tested on Ultrafabrics materials with no adverse effects when cleaning guidelines are followed as directed:

- Detergent or Soap and Water (prior to disinfection)
- 1:5 Bleach/Water Solution
- Alcohol-Based Cleaners (at least 70% alcohol)
- Quaternary-Based Disinfectants
- Hydrogen-Peroxide Based Cleaners

For a complete list of our recommended cleaners and disinfectants please visit [Cleaning and Care](#).

As always, when using any disinfectant, it is important to follow the manufacturer's instructions, not saturate the surface of our fabric, and remove all residue with a clean, damp cloth so the surface of our fabric will not be damaged.

For additional information on COVID-19, please visit [CDC.gov](#).

The safety and well-being of our customers are very important to us. We urge all to take precautions to remain healthy and inhibit the spread of the virus.
